Types of studies in *Structural Equation Modeling* 1994–2011

Anne Boomsma

Department of Statistics & Measurement Theory, University of Groningen

An overview is given of so-called original articles that have been published in the *Structural Equation Modeling* journal over the years 1994–2011, followed by a number of summarizing figures and tables. Each article is primarily categorized [in blue] regarding the type of data being used. The inventory was triggered by curiosity to explore the application of Monte Carlo studies in structural equation modeling research. The employed coding is shown in Table 1.

Multiple categorization has been applied. If an article uses both Monte Carlo data [MC] and empirical data [ED], for example, it is categorized as [MC,ED].

If some of our categorizations would be apparently wrong, or if other errors have been made in the overview, we would appreciate to be informed, so that the necessary corrections can be implemented. Our e-mail address is a.boomsma@rug.nl.

Table 1. Coding used to categorize articles.

<i>Code</i>	<i>Meaning</i>
AD	Analysis of artificial data, i.e., generated data, but not a Monte study; often single sample cases
AD(P)	Population study, i.e., analysis of self-selected population data
EM	Analysis of empirical data
EM(S)	Secondary analysis of empirical data collected by other researchers
EM(SS)	Analysis of a (sub)sample from an empirical data bank; often primarily collected by other researchers
MC	Monte Carlo study
MC(META)	Meta-modeling applied in a Monte Carlo study
TH	Theoretical study without analysis of empirical or artificial data
TH(R)	Theoretical study having a review character

1994

Marsh, H.W. (1994). Confirmatory factor analysis models of factorial invariance: A multifaceted approach. 1(1), 5–34. [ED(SS)]

Bagozzi, R.P., & Heatherton, T.F. (1994). A general approach to representing multi-faceted personality constructs: Application to state self-esteem. 1(1), 35–67. [ED]

Short, L.M., & Hennessy, M. (1994). Using structural equations to estimate effects of behavioral interventions. 1(1), 68–81. [AD]

Heck, R.H., & Johnsrud, L.K. (1994). Workplace stratification in higher education administration: Proposing and testing a structural model. 1(1), 82–97. [ED]

Gerbing, D.W., & Hamilton, J.G. (1994). The surprising viability of a simple alternate estimation procedure for construction of large-scale structural equation measurement models. 1(2), 103–115. [MC(META)]

Marsh, H.W., & Grayson, D. (1994). Longitudinal confirmatory factor analysis: Common, time-specific, item-specific, and residual-error components of variance. 1(2), 116–145. [ED(S)]

Thompson, K.N., & Getty, J.M. (1994). Structural model of relations among quality, satisfaction, and recommending behavior in lodging decisions. 1(2), 146–160. [ED]

Williams, L.J., & Holahan, P.J. (1994). Parsimony-based fit indices for multiple-indicator models: Do they work? 1(2), 161–189. [MC]

Benson, J., & El-Zahhar, N. (1994). Further refinement and validation of the revised test anxiety scale. 1(3), 203–221. [ED]

Bagozzi, R.P. (1994). Effects of arousal on organization of positive and negative affect and cognitions: Application to attitude theory. 1(3), 222–252. [ED]

Bullock, H.E., Harlow, L.L., & Mulaik, S.A. (1994). Causation issues in structural equation modeling research. 1(3), 253–267. [TH]

Fraas, J.W., & Newman, I. (1994). A binomial test of model fit. 1(3), 268–273. [ED(S)]

Brown, R.L. (1994). Efficacy of the indirect approach for estimating structural equation models with missing data: A comparison of five methods. 1(4), 287–316. [MC]

Marsh, H.W., & Grayson, D. (1994). Longitudinal stability of latent means and individual differences: A unified approach. 1(4), 317–359. [ED(SS)]

Rotzien, A., Vacha-Haase, T., Murthy, K., Davenport, D., & Thompson, B. (1994). A confirmatory factor analysis of the Hendrick-Hendrick Love Attitudes Scale: We may not yet have an acceptable model. 1(4), 360–374. [\[ED\]](#)

1995

O'Brien, R.M., & Reilly, T. (1995). Equality in constraints and metric-setting measurement models. 2(1), 1–12. [\[AD\]](#)

Cadigan, N.G. (1995). Local influence in structural equation models. 2(1), 13–30. [\[ED\(S\)\]](#)

Hershberger, S.L., Corneal, S.E., & Molenaar, P.C.M. (1995). Dynamic factor analysis: An application to emotional response patterns underlying daughter/father and stepdaughter/stepfather relationships. 2(1), 31–52. [\[ED\]](#)

Shen, H., Bentler, P.M., & Comrey, A.L. (1995). A comparison of models of medical school student selection. 2(2), 93–100. [\[ED\]](#)

Kaplan, D., & George, R. (1995). A study of the power associated with testing factor mean differences under violations of factorial invariance. 2(2), 101–118. [\[AD\(P\)\]](#)

Ding, L., Velicer, W.F., & Harlow, L.L. (1995). Effects of estimation methods, number of indicators per factor, and improper solutions on structural equation modeling fit indices. 2(2), 119–143. [\[MC\(META\)\]](#)

Duncan, T.E., & Duncan, S.C. (1995). Modeling the processes of development via latent variable growth curve methodology. 2(3), 187–213. [\[ED\]](#)

Stevens, J.J. (1995). Confirmatory factor analysis of the Iowa Tests of Basic Skills. 2(3), 214–231. [\[ED\]](#)

Szeinbach, S.L., Barnes, J.H., & Summers, K.H. (1995). Comparison of a behavioral model of physicians' drug product choice decision with pharmacists' product choice recommendations: A study of the choice for the treatment of panic disorder. 2(3), 232–245. [\[ED\]](#)

Marsh, H.W. (1995). Δ^2 and $\chi^2_{\text{I}2}$ fit indices for structural equation models: A brief note of clarification. 2(3), 246–254. [\[TH\]](#)

Raykov, T., & Widaman, K.F. (1995). Issues in applied structural equation modeling research. 2(4), 289–318. [\[TH\]](#)

Wang, J., Fisher, J.H., Siegal, H.A., Falck, R.S., & Carlson, R.G. (1995). Influence of measurement errors on HIV risk behavior analysis: A case study examining condom use among drug users. 2(4), 319–334. [ED]

Stankov, L., & Raykov, T. (1995). Modeling complexity and difficulty in measures of fluid intelligence. 2(4), 335–366. [ED]

1996

Wright, B.D. (1996). Comparing Rasch measurement and factor analysis. 3(1), 3–24. [ED]

Smith, R.M. (1996). A comparison of methods for determining dimensionality in Rasch measurement. 3(1), 25–40. [MC]

Chang, C.-H. (1996). Finding two dimensions in MMPI-2 Depression. 3(1), 41–49. [ED]

Green, K.E. (1996). Dimensional analyses of complex data. 3(1), 50–61. [ED]

Gerbing, D.W., & Hamilton, J.G. (1996). Viability of exploratory factor analysis as a precursor to confirmatory factor analysis. 3(1), 62–72. [MC]

Robles, J. (1996). Confirmation bias in structural equation modeling. 3(1), 73–83. [TH]

Overviews

In Table 2 an overview is given of the types of studies in *Structural Equation Modeling* from 1994 through 2011. The overall prevalence of Monte Carlo studies and empirical data applications, summarized over 1994–2011, is shown in Figure 1. Yearly information of publication is also displayed in Figures 2 and 3.

Table 2. Frequency of Monte Carlo studies and empirical data applications published in the *Structural Equation Modeling* journal over the period 1994–2011.

Year	Articles	EM (S, SS)	MC	EMC (MC, AD, S, SS)	AD	P	TH (R)	META
1994	15	10 (2, 2)	3		1	1		1
1995	13	8 (1, 0)	1		1	1	2	1

2011	29	8 (3, 2)	16	4 (2, 2, 3, 1)			1	2
Total	398	168 (45, 27)	125	40 (25, 15, 21, 10)	22	7	36 (6)	36

Note. EM (S): empirical data only (S: secondary analysis of data, SS: subsample from empirical data base), MC: strict Monte Carlo only; EMC (MC, AD, S, SS): both empirical data and broad Monte Carlo (MC: strict Monte Carlo, AD: artificial data); AD: artificial data only; P: population study; TH: theoretical only (R: review study); META: meta-modeling in a strict MC study.

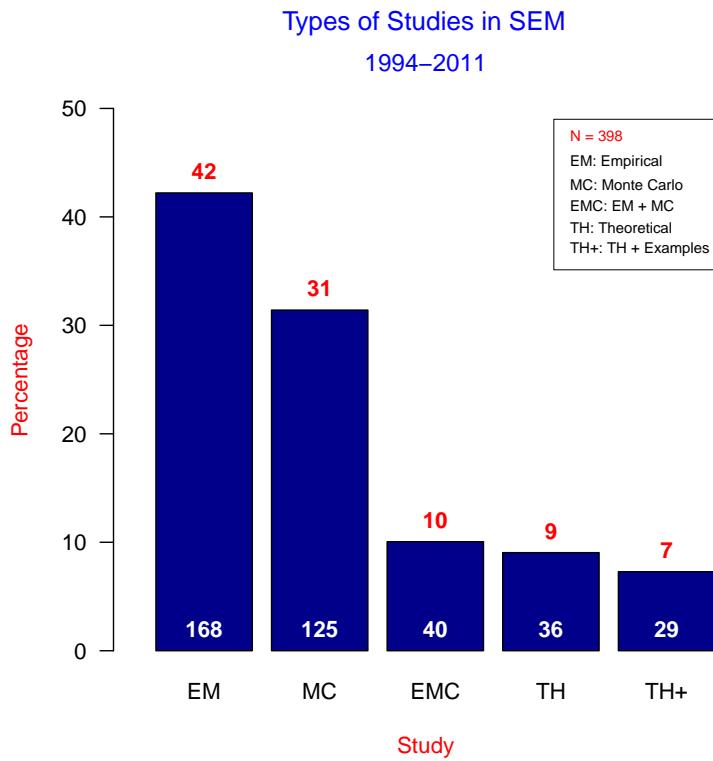

Figure 1. Monte Carlo studies and empirical data applications in *Structural Equation Modeling* over the years. EMC: both empirical and broad Monte Carlo data; EM: empirical data only; MC: strict Monte Carlo data only.

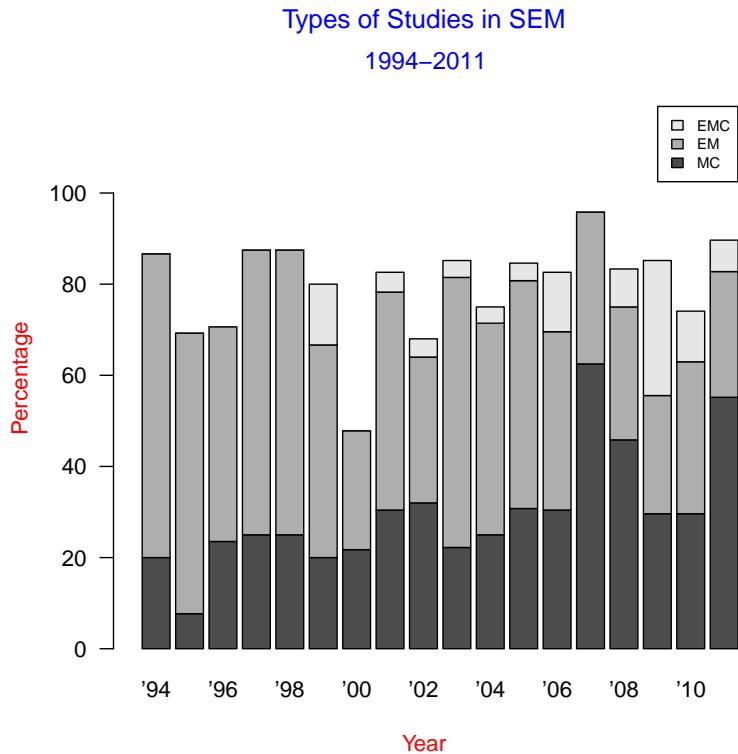

Figure 2. Monte Carlo studies and empirical data applications in *Structural Equation Modeling* over the years. EMC: both empirical and broad Monte Carlo data; EM: empirical data only; MC: strict Monte Carlo data only.

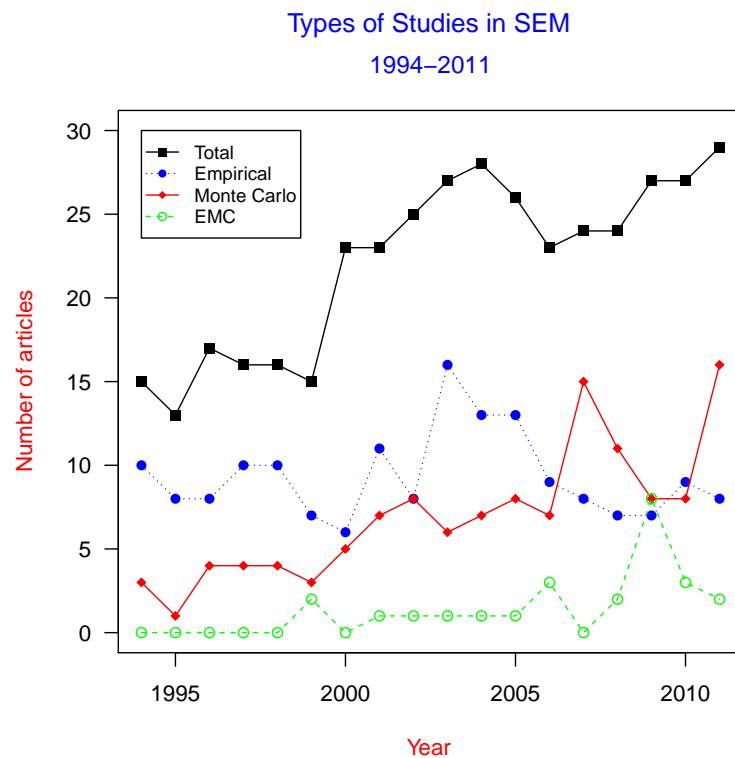

Figure 3. Publications of Monte Carlo studies and empirical data applications in *Structural Equation Modeling* over the years.

Types of studies in Structural Equation Modeling
